

Stripe Payment Module – Magento 2

USER MANUAL

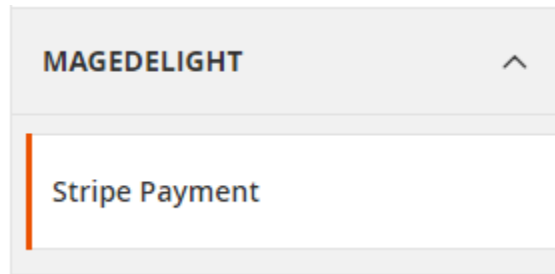

MAGEDELIGHT.COM

E: SUPPORT@MAGEDELIGHT.COM

License Key

After successful installation of Stripe Payment extension by using the Magento setup, you are now required to configure the license key in the admin configuration section. You can set it from:

Admin > Stores > Configuration > MageDelight > Stripe Payment > License Configuration. As shown in screenshot below:

You will find two text boxes asking for Serial Key and Activation Key, which you can find in the email you received upon the purchase of extension. See screenshot below:

License Configuration

Serial Key

[STORE VIEW]

Enter the serial key that you received at time of purchase.

Activation Key

[STORE VIEW]

Enter the activation key that you received at time of purchase.

Backend (Admin side) Stripe Payment Module

Stripe payment gateway configuration

You can configure Stripe Payment extension through configuration section, Admin > System > Configuration > Payment Methods > Stripe Payment (Credit Card Processing) By MageDelight.

Stripe Payment Method Configuration Options

1. Enabled

This can enable/disable the Stripe Payment method.

2. Title

Here you can define the label for Stripe Payment method that will display in

- a. Payment section of one page checkout.
- b. Payment information of order, invoice, credit memo and shipment section.

3. Test Mode

Admin can define the mode of Stripe Payment method of web shop. Merchant can set either “Yes”/ “No” for this option depends on the environment of web shop (Production or Development).

4. Test Secret Key

If test mode is enable for development/test, define test secret key here.

5. Test Public Key

If test mode is enable for development/test, define test public key here.

6. Live Secret Key

Set real account secret key here, while web-shop is on live mode.

7. Live Public Key

Set real account secret key here, while web-shop is on live mode.

8. Payment Action

Admin can define the payment action that would take on successful order placed by user. Admin can choose,

- **Authorize and Capture:** This payment action will directly capture the requested amount from the customer credit card on placing an order from frontend or backend. Invoice will automatically create when user successfully place an order.
- **Authorize Only:** This payment action will only authorize the requested amount on the credit card of customer on placing an order from frontend or backend.

In this payment action invoice will not be created after order creation successfully. Admin will have to manually create invoice from backend from order management section.

9. Accepted Currency

This option defines the currency that merchant want to accept with Stripe payment method.

10. Debug

This option defines the debugging mode of Stripe payment method. Admin can choose “Yes / No” depending on the Production / Development environment if web site. Normally this option should only enabled for development environment.

11. Credit Card Types

This option defines the list of Credit Cards that customer can choose from card selection field on payment section of one page checkout page.

12. Credit Card Verification

This field will allow admin to select whether Card Code Verification option should be display or not on payment section.

13. Is save cards details optional?

The customer must have to save the credit card for future transaction processing if this field it set to "No". By selecting "Yes" for this field will allow customers to choose whether they want to save the credit card for future processing or not.

14. New Order Status

This option defined the order status after successful processing the order.

15. Payment from Applicable Countries

This option allow admin to configure Stripe Payment gateway for specific countries,

- By selecting "All Allowed Countries" from this option will make Stripe Payment for customers from all the countries.
- By selecting "Specific Countries" from this option will make Stripe Payment method for customers from specific countries.

16. Payment from Specific Countries

This option will only enabled if "Payment from Applicable Countries" option will set to "Specific Countries".

This option will be multi select option so admin can choose one or more countries from this fields for which this payment method will be display on payment section.

17. Minimum Order Total

This option defines the minimum order total for which this payment method display on payment section of one-page checkout on frontend.

18. Maximum Order Total

This option defines the maximum order total for which this payment method will display on payment section of one-page checkout page of frontend.

19. Sort Order

This option defined the sort order of payment method on the payment step on checkout one page of frontend.

Manage change in merchant details

Admin can edit the merchant details (though it is not a good practice to change). **On edit, it is required to delete the saved credit cards manually from Stores->configuration->Sales->Payment Methods -> Stripe Payment (Credit Card Processing).**

Note: All saved credit cards details are associated with merchant details. Hence, if merchant edits the details it is required to delete the saved cards because for the authorization merchant details should be matched with saved credit cards

Manage Saved cards for particular customer

Admin can manage customer cards from customer management section of backend interface. In customer edit section admin can go to the “**Saved Cards**” tab as shown in the below screenshot:

Frontend with Stripe Payment

Stripe Payment: Manage My Saved Card

A logged in customer can able to store and manage cards with Stripe for future uses. To save and manage cards, customer needs to login to website and go to,

My Account > Stripe (My Saved Cards)

Where the customer will get list of all saved card if any. Customer can able to save multiple saved cards to use with next order checkout. As shown in the below screenshot:

As you can see with above screenshot logged in customer have already stored three cards listed. Customer can able to edit each cards information if required, they can also have option to delete particular card.

It also provide one be good feature is to define default cart, customer will have an option to set any card as default card. Default card would be always be on the top of list, this make easy for customer to easily place order or user default card.

Customer will also have button to add new card, which will head to add new card form, which needs to filed with customer billing address and card details as shown with below screenshot,
